EXECUTIVE SUMMARY · THIS WEEK VS LAST WEEK

			LAST WEEK	CURRENT	Δ
01	Product Quality		6.6/10	7.0/10	▲ +0.4
02	Customer Service		5.5/10	5.6/10	▲ +0.1
03	User Feedback		6.6/10	6.5/10	▼ -0.1
04	Billing Transparency		3.3/10	3.6/10	▲ +0.3
05	Brand Trust & Legitimacy		4.4/10	4.4/10	— 0.0

▲ TOP IMPROVEMENTS THIS WEEK

01 Product Quality

7.0_{/10} ▲ +0.4

Accessibility & consistency — Last week's performance complaint cluster turned out to be a one-cycle blip, not a regression. The App Store performance topic dropped from 12 mentions to 7 this week and the average rating attached to it climbed from 2.8 to 3.0. Whatever caused the spike has resolved on its own — no sprint intervention required.

02 Customer Service

5.6_{/10} ▲ +0.1

Response speed & quality — Support sentiment is the best-improved App Store theme this week — Customer Support tagged reviews climbed to 4.0 stars across 14 mentions (up from 3.5 last week). 10 of 14 were tagged positive. Reviewers are now naming the support team specifically as the reason they're staying.

04 Billing Transparency

3.6_{/10} ▲ +0.3

Price disclosure — Pricing complaints fell from 26 combined App Store and Google Play mentions to 18 this week — the largest week-over-week improvement in any tagged topic. The average rating attached to pricing complaints climbed from 1.6 to 2.4 stars on App Store and from 1.3 to 2.3 on Google Play. Whatever messaging changed is landing.

▼ TOP DECLINES THIS WEEK

03 User Feedback

6.5_{/10} ▼ -0.1

Review authenticity signals — Trustpilot's invited-review share jumped from 84% to 97% this week — the highest reading we've ever recorded. The 4.4-star average is real, but the audience producing it is now almost entirely company-selected. Two reviews remain compliance-flagged by Trustpilot itself, unchanged from last week.

01

Product Quality

▲ +0.4

7.0/10

Last week's first-ever performance complaint cluster has healed in one cycle — the App Store performance topic dropped from 12 mentions to 7 and the rating attached to it climbed from 2.8 to 3.0. Bug discussions are now mostly resolved (average 3.6 stars, up from 1.0). The product story this week is recovery, not regression.

Marketing vs reality**Mixed · 6.3**

▲ +0.3

The bite-sized promise keeps holding up where it matters — execution complaints faded this week. Bug-tagged reviews shifted from 100% negative to mostly resolved (8 App Store mentions averaging 3.6 stars, up from 1.0 last week). The one fresh negative signal is creative-side: a Reddit post calling the 'Speak Up Confidently' YouTube ad 'extremely annoying' with 'terrible tone' — a marketing tone complaint, not a product one.

Unique value proposition**Healthy · 7.3**

The structured Journey format keeps doing the heavy lifting — 63 App Store reviews this week tagged 'Satisfied users' averaging 4.9 stars, and 14 reviews specifically praising 'Complexity' (meaning low complexity) at 4.8 stars. Use-case reviews land at 4.4 stars across 12 App Store mentions. No competitor or alternative format gets the same density of unprompted praise anywhere in the dataset.

Accessibility & consistency**Healthy · 7.3**

▲ +0.8

Last week's performance scare was a one-cycle blip, not a regression. App Store performance complaints dropped from 12 mentions to 7 this week, and the average rating attached to that topic climbed from 2.8 to 3.0. Either the underlying transient (load spike or temporary build issue) cleared on its own, or the team caught it quietly. Cross-platform ratings remain stable: Trustpilot 4.4, App Store 4.6, Google Play 4.2.

02

Customer Service

▲ +0.1

5.6/10

Support sentiment quietly became the best-improved theme on the App Store this week — Customer Support tagged reviews climbed from 3.5 stars to 4.0 across 14 mentions. The structural concern is unchanged: reply does not equal resolution, and one negative App Store review this week went without a company reply (the first miss in our tracking).

Support channel availability**Mixed · 6**

Coverage is unchanged: email and the help portal carry everything, no live chat or phone tier. The exceptional reply density is happening through manual operations, not tooling — which means the constraint isn't channels, it's how much further the team can scale this approach before throughput becomes the bottleneck.

Response speed & quality**Mixed · 6.5**

▲ +0.5

Support sentiment is the best-improved theme on the App Store this week — Customer Support tagged reviews climbed to 4.0 stars across 14 mentions, up from 3.5 last week. 10 of 14 were positive, and reviewers are now naming the support team specifically as why they're staying. The reply quality work the team has been doing is starting to land in the data.

Complaint resolution rate**Mixed · 4.3**

▼ -0.2

The 100% reply-to-negative streak broke on App Store this week — 1 of 11 negative reviews went without a company response (90.9%). Google Play actually moved the other direction, climbing to 100% (4 of 4 negatives replied). The structural concern persists: reply doesn't equal resolution, and BBB's historical 15% formal-resolution rate still tells a different story.

03

User Feedback

▼ -0.1

6.5/10

The biggest sentiment swing of the quarter happened on App Store and Google Play combined — Appbot's machine-learning analysis flipped from 63% positive last week to 78% positive this week, with the negative share cut nearly in half. The catch: that same week, Trustpilot's invited-review share jumped from 84% to 97%, the highest reading we've ever recorded. The brand looks more positive across the board, but the channel where the team controls the invitation list now reads as nearly fully managed.

Review volume & rating**Healthy · 7.3**

Volume keeps growing on every monitored platform, but the gap between the two stores widened again. Trustpilot added 347 reviews this week and holds 4.4 stars. App Store added 260 reviews at a steady 4.6. Google Play added 50 reviews — and the rating slipped from 4.21 to 4.18 stars. The Google Play drop is small but in the wrong direction, and it widens the cross-platform gap that this dimension flags.

Sentiment & platform consistency**Mixed · 6**

▲ +1.0

The biggest single-week sentiment swing of the quarter — Appbot's machine-learning analysis flipped from 63% positive last week to 78% positive this week. The 'Dissatisfied users' theme dropped from 21 reviews to 7. Trustpilot's negative share fell from 7.5% to 3.0%. The cross-platform consistency that scored 5/10 last week is materially better now — but the structural gap between Trustpilot (3% negative) and Google Play (20% negative) hasn't disappeared, it's just narrower.

Review authenticity signals**Mixed · 4.5**

▼ -1.0

Trustpilot's invited-review share jumped from 84% to 97% this week — the highest reading we've ever recorded. Of the 200 most-recent reviews, 194 came from a company invitation. Two reviews remain compliance-flagged by Trustpilot itself (unchanged from last week, but persistent). RealReviews still ranks RiseGuide 287 out of 364 in their Education category. The 4.4 average rating is real; the audience producing it is now almost entirely a company-selected list.

Company responsiveness to reviews**Healthy · 8**

▼ -0.5

The 100% reply-to-negative streak broke on App Store this week — 10 of 11 negative reviews replied (90.9%). Google Play actually climbed to 100% (4 of 4) and Trustpilot holds 100% across the 200 sample. Still the highest-scoring criterion in the scorecard, but the App Store dip is the first time this metric has moved down in our tracking. Worth catching now.

The largest week-over-week improvement in any topic on either store came from billing — App Store and Google Play combined pricing complaints fell from 26 mentions to 18, and the negative share of those mentions almost halved. The cancellation guide is working. But the underlying flows that produce 30+ furious reviews per week are still in place, and the company has admitted that to reviewers without shipping a fix.

Price disclosure

Mixed · 5.5

▲ +0.5

The largest week-over-week improvement in any tagged topic on either store. Pricing complaints fell from 26 mentions to 18 across App Store and Google Play combined, and the average rating attached to those mentions climbed from 1.6 to 2.4 stars on App Store and from 1.3 to 2.3 on Google Play. The disconnect isn't gone — the onboarding flow's framing of recurring vs one-time charge still drives the remaining 18 complaints — but the gap is closing for the first time in our tracking.

Hidden / recurring charges

Critical · 2.5

▲ +0.5

Payment-tagged complaints improved on both stores this week — App Store averaged 2.3 stars (up from 1.2 last week, 10 of 14 negative) and Google Play 2.0 stars (up from 1.3, 2 of 3 negative). Real improvement directionally, but still in 'users feel defrauded' territory. The cancellation guide solves the exit; the entry path (auto-renew after a 'one-time' purchase) is what still generates most of the residual rage.

Ease of cancellation

Mixed · 4.5

▲ +0.2

The cancellation guide continues to land for users who find it. App Store Customer Support reviews this week averaged 4.0 stars (up from 3.5 last week), with reviewers naming [riseguide.com/cancel](https://www.riseguide.com/cancel) as 'the path that worked.' The documentation already exists; the remaining lift is purely about discoverability — link it from the in-app billing screen and the App Store description and this score moves another point.

UI dark patterns

Critical · 2.3

▲ +0.3

Pricing-flow complaints improved measurably this week, but the underlying dark pattern (the admitted 'Continue-charge trigger') still hasn't been fixed. Two Trustpilot reviews remain flagged by Trustpilot's own compliance team — unchanged from last week, which means they're now persistent, not transient. Reviewers actively cite the company's own past replies as evidence the team knows and isn't acting.

Refund policy clarity & enforcement

Critical · 3

Refund handling continues to run more generously in practice than in policy. Trustpilot replied to all 11 negative reviews this week and the App Store Customer Support topic averaged 4.0 stars — refund-flow mentions sit inside that. The structural gap is unchanged: no published refund policy on [riseguide.com](https://www.riseguide.com) keeps every refund a private negotiation. A 5-minute published-policy change is the easiest score-mover in this dimension.

Daniel Davidson's RiseGuide review on YouTube quietly crossed 51,000 views this week — passing 50,000 cleanly and becoming the highest-engagement independent positive coverage the brand has ever earned. That single creator is now doing more legitimacy work than every press placement combined. The structural gaps haven't moved: founder is still anonymous, no leadership page exists, and two Trustpilot reviews are still under compliance review.

Company age & history

Critical · 3

Young in category, and the only fast lever is a credible founder story — which still doesn't exist. The entity is roughly 2 years old (BBB, March 2023), the app roughly 6 months (App Store, November 2024). Time alone moves this eventually. Right now the only public record of leadership remains the name in BBB filings.

Legal & brand identity alignmer

Mixed · 5.3

Scam Detector stayed out of the top 10 for the second week running — a quietly important durability signal. RiseGuide-owned domains still hold 4 of the 20 visible first-page Google slots across the three keywords sampled. The two Trustpilot compliance flags are now persistent rather than transient (unchanged from last week), which is worth watching but not yet escalating. Owned-property dominance still protects the brand short-term and still caps how much third-party legitimacy can accrue.

Third-party recognition

Mixed · 4.7

▲ +0.2

Daniel Davidson's RiseGuide review crossed 51,000 YouTube views this week — up from 40,000 last week, and now the single highest-engagement positive independent coverage in our tracking. Across all 30 sampled videos, 80% landed positive (up from 73% last week). Savage Reviews' 'scam' framing video held flat at 13,000 views (not gaining traction). The brand has earned an organic creator champion; the question is whether the team formalises that relationship before it cools.

Leadership transparency

Critical · 3

The longest-running flat criterion in the report. No founder bio shipped this week, no About page on riseguide.com, no LinkedIn presence, no media interviews surfaced anywhere in this week's search results. Two Trustpilot compliance flags this week again raise identity questions. A 200-word bio with a real photo is still the single most fixable lift in the entire scorecard.

Online presence consistency

Mixed · 6

Owned channels remain perfectly aligned — same support@ and trustpilot@ contacts visible on riseguide.com, both stores, Trustpilot, and BBB. The gap continues to be community presence relative to brand reach: Instagram and LinkedIn footprints sit at modest size against an audience of 500,000+ app downloads. Buttoned-up where the brand controls the message; thin where the audience expects to find it.
