EXECUTIVE SUMMARY · THIS WEEK VS LAST WEEK

			LAST WEEK	CURRENT	Δ
01	Product Quality		6.7/10	6.6/10	▼ -0.1
02	Customer Service		4.3/10	5.5/10	▲ +1.2
03	User Feedback		6.1/10	6.6/10	▲ +0.5
04	Billing Transparency		2.8/10	3.3/10	▲ +0.5
05	Brand Trust & Legitimacy		3.6/10	4.4/10	▲ +0.8

▲ TOP IMPROVEMENTS THIS WEEK

02 Customer Service

5.5_{/10} ▲ +1.2

Complaint resolution rate — The 'every negative review gets a reply' practice has matured into a default this week — 17 of 17 on App Store, 18 of 19 on Google Play, 4 of 4 on Trustpilot. Reply doesn't equal resolution (BBB still at 15% formal), but the consistency itself is a structural shift.

03 User Feedback

6.6_{/10} ▲ +0.5

Company responsiveness to reviews — Responsiveness has crossed into 'best signal anywhere' territory — every negative review on every monitored platform got a reply this week. App Store hit 100% across all 100 sampled reviews. This is no longer the leverage point; making the bar visible to leadership is what keeps it permanent.

04 Billing Transparency

3.3_{/10} ▲ +0.5

Ease of cancellation — The cancellation guide is working — but only for users who already know to look for it. 7 of 10 iOS Customer Support reviews trended positive at 3.7 stars, with reviewers naming riseguide.com/cancel as 'the path that worked.' First time this topic shows net-positive sentiment.

05 Brand Trust & Legitimacy

4.4_{/10} ▲ +0.8

Third-party recognition — Independent YouTube creators have quietly become the strongest recognition vector — outpacing both press and BBB. 30 videos across our keywords ran 73% positive this week, with Daniel Davidson's 40,000-view review the standout. Faster compounding lever than press outreach.

▼ TOP DECLINES THIS WEEK

01 Product Quality

6.6_{/10} ▼ -0.1

Accessibility & consistency — First crack in product consistency this week, narrowly iOS-only. Performance complaints crossed our 5-mention threshold for the first time — small in absolute terms but visible against 6 months of stability. Either a recent iOS build regressed, or load patterns are stressing the app.

01

Product Quality

▼ -0.1

6.6/10

The structured Journey format is the loudest positive signal in the entire dataset — louder than any other theme on any platform. But the first crack in product consistency appeared this week, narrowly on App Store: a new performance complaint cluster that wasn't there last week.

Marketing vs reality**Mixed · 6**

The bite-sized promise is delivering — performance is the new and only crack. 10 App Store reviews flagged slowness (averaging 2.7 stars) and 3 bug reports all landed at 1 star, which means real defects, not subjective gripes. This week is the first time these themes have surfaced together; nothing about the marketing is overpromising, but execution is starting to leak in narrow places.

Unique value proposition**Healthy · 7.3**

▲ +0.3

The structured Journey format is the loudest positive signal in the entire scorecard — louder than any other theme on any platform. 24 App Store reviews this week (averaging 4.4 stars, 88% positive) name it specifically, and Reddit users in r/ProductivityApps cite RiseGuide in side-by-side comparison threads. Users self-organize around this format, not around the content itself.

Accessibility & consistency**Mixed · 6.5**

▼ -0.5

The first crack in product consistency appeared this week, and it's narrowly iOS-only. 10 performance complaints averaging 2.7 stars — small in absolute terms but visible against 6 months of stable cross-platform ratings (Trustpilot 4.4, App Store 4.6, Google Play 4.2). Either a recent iOS build regressed, or load patterns are now stressing the app. Worth a sprint-check before it compounds.

02

Customer Service

▲ +1.2

5.5/10

Reply density has hardened into a default — every negative review on every monitored platform got a response this week. But reply doesn't equal resolution, and the BBB record (15% formal resolution) still tells a different story. The gap between 'answered' and 'fixed' is the next score-mover.

Support channel availability

Mixed · 6

▲ +1.0

Reply density is exceptional on the channels that exist, which means the constraint isn't tooling — it's tier. Trustpilot 99% within minutes, App Store 100% across 100 sampled reviews, Google Play 77%. No live chat, no phone — just email and the help portal carrying everything. Adding a live-chat tier is the obvious lever if compression from minutes to seconds matters.

Response speed & quality

Mixed · 6

▲ +1.0

Reply speed is no longer the bottleneck — it's reply quality. Trustpilot hits 99% within minutes and App Store reaches 100% across all 100 sampled reviews, but billing-complaint replies still read templated, not human. Writing 2–3 custom-tuned billing response templates would meaningfully shift sentiment on the highest-friction topic without scaling support headcount.

Complaint resolution rate

Mixed · 4.5

▲ +1.5

The 'every negative review gets a reply' practice has hardened into a default this week: 17 of 17 on App Store, 18 of 19 on Google Play, 4 of 4 on Trustpilot. But reply doesn't equal resolution, and BBB's historical 15% formal-resolution rate still tells a different story. Closing the gap between 'answered' and 'actually fixed' is what moves this score above 5.

03

User Feedback

▲ +0.5

6.6/10

The same brand reads roughly 6x more negative on Android than on Trustpilot — same product, same week, different audiences. That gap isn't statistical noise; it's a structural reputation split between invitation-managed channels and organic-only ones.

Review volume & rating**Healthy · 7.3**

▲ +0.3

Volume growth is healthy across the board — but the distribution reveals what aggregate numbers hide. Trustpilot added 444 reviews this week (+2.5%) at stable 4.4 stars. Yet Google Play actually sits at 4.2 stars against the often-quoted 4.6 — a real 0.3–0.5-star gap between Apple and Android users that the headline obscures. App Store at 4.6, Reviews.io at 4.7, RealReviews 4.3.

Sentiment & platform consistency**Mixed · 5**

The same brand reads roughly 6x more negative on Android than on Trustpilot this week — Google Play 38% negative vs Trustpilot 6%, App Store sitting in between at 16%. That gap isn't statistical noise; it's a structural split between invitation-managed channels and organic-only ones. The implication: any sentiment cited externally needs a channel qualifier.

Review authenticity signals**Mixed · 5.5**

Trustpilot's 82% invited-share is too high to claim organic credibility — and for the first time in our tracking, 2 reviews this week got compliance-flagged by Trustpilot itself. RealReviews ranks RiseGuide 287 out of 364 in their Education category, which echoes the same signal: an organic core probably exists, but heavy solicitation caps how authentic the review profile can ever look.

Company responsiveness to reviews**Healthy · 8.5**

▲ +1.5

This has crossed into 'best signal anywhere' territory — every other criterion in the scorecard has more headroom than this one. App Store replied to 100% of all 100 sampled reviews this week, Trustpilot 99%, and 100% / 95% of negatives specifically. This is no longer the leverage point; locking the standard in is.

04

Billing Transparency

▲ +0.5

3.3/10

When 18 payment complaints land at exactly 1.0–1.3 stars on both stores, that's not user confusion — that's rage. The new cancellation guide solves the exit; the entry (auto-renew after a 'one-time' purchase) still generates 30 furious reviews per week, and no documentation fix touches it.

Price disclosure**Mixed · 5**

▲ +1.0

Prices are disclosed correctly on every store listing — and yet 24 reviews this week cite pricing confusion (16 iOS at 1.7 stars, 8 Google Play at 1.4 or lower). The disconnect isn't store-side; it's the onboarding flow's framing of recurring vs one-time charge. The cancel guide solves discovery after the fact; it doesn't solve clarity at the moment of payment.

Hidden / recurring charges**Critical · 2**

When 12 of 12 iOS payment complaints land at exactly 1.0 stars this week (and 6 of 6 on Google Play at 1.3 stars), that's not confusion — that's rage. Users feel actively defrauded, not just misinformed. The new cancel guide solves the exit; the entry (auto-renew after a 'one-time' purchase) still generates 30 furious reviews per week, untouched by any documentation fix.

Ease of cancellation**Mixed · 4.3**

▲ +0.3

The cancellation guide is working — but only for users who already know to look for it. 7 of 10 iOS Customer Support reviews trended positive at 3.7 stars, reviewers naming riseguide.com/cancel as 'the path that worked.' A May 14 Trustpilot review still flagged the missing in-app cancel option. The documentation already exists; only its discoverability is constrained.

UI dark patterns**Critical · 2**

The company has publicly admitted the 'Continue-charge trigger' as a known issue in Trustpilot replies — but hasn't shipped a fix. Reviewers now cite those replies as evidence the team is aware but not acting. 14 iOS pricing-tagged reviews this week at 1.7 stars, plus 2 first-ever Trustpilot compliance flags. Acknowledged-but-unfixed creates worse reputational damage than the original issue.

Refund policy clarity & enforcement**Critical · 3**

▲ +1.0

Refund handling is more generous in practice than the public policy suggests — Trustpilot replied to 100% of the 4 negative reviews sampled, and iOS Customer Support shows refund-flow mentions trending positive. But the lack of a published refund policy on riseguide.com keeps every refund a private negotiation rather than a stated right. Publishing it in writing is a 5-minute change that materially lifts this score.

05

Brand Trust & Legitimacy

▲ +0.8

4.4/10

Founder anonymity is the single most fixable score in the scorecard — and reviewers are now explicitly asking about it. Independent YouTube creators have quietly become the strongest recognition vector, outpacing both press and BBB. Owned-property dominance protects short-term but caps how much third-party legitimacy the brand can earn.

Company age & history**Critical · 3**

Young in category, and the only fast lever is a credible founder story — which doesn't exist yet. The entity is roughly 2 years old (BBB, March 2023), the app roughly 6 months (App Store, November 2024). Time alone moves this eventually; right now the only public record of leadership is a name in BBB filings.

Legal & brand identity alignment**Mixed · 5.3**

▲ +1.3

RiseGuide owns 10 of the 20 first-page Google slots across all 3 keywords — that sounds positive, but it's a sign independent voices haven't crystallized yet. Scam Detector dropped out of the top 10 this week (improving signal), and 2 new Trustpilot compliance flags appeared (concerning). Owned-property dominance protects short-term but ultimately caps how much third-party legitimacy can accrue.

Third-party recognition**Mixed · 4.5**

▲ +1.5

Independent YouTube creators have quietly become the strongest recognition vector — outpacing both traditional press and BBB. 30 videos across our keywords ran 73% positive this week, with Daniel Davidson's 40,000-view positive review the standout (Digibase Media 10K positive; Savage Reviews 13K 'scam' framing as counterpoint). Creator coverage compounds faster than press; AI Journal April piece remains the anchor.

Leadership transparency**Critical · 3**

Founder anonymity is the single most fixable score in the entire scorecard — and reviewers are now explicitly asking about it. 2 Trustpilot reviews this week (both compliance-flagged) raised identity questions. No About-us page on riseguide.com, no LinkedIn presence, no media interviews surfaced anywhere in this week's search. A 200-word founder bio with a real photo would lift this 2–3 points in 7 days.

Online presence consistency**Mixed · 6**

▲ +1.0

Official channels are perfectly aligned across the board — same support@ + trustpilot@ contacts on riseguide.com, both stores, Trustpilot, BBB, all owned subdomains. The gap isn't consistency, it's community: Instagram and LinkedIn footprints are light relative to 500,000+ app downloads. Buttoned-up where the brand controls the message; invisible where the audience expects to find it.
